

Eliminate Passwords. Enhance Security. Delight Customers.

Passwords are done. They cost your enterprise time and money. Passwords are leading causes of security breaches. And of course, customers hate passwords and struggle with password resets even more.

AuthentifID™ solves these problems with seamless, passwordless login, secured with FIDO2 device-based authentication and phishing-resistant cryptographic security.

HOW IT WORKS

Other passwordless solutions assume it's the account owner registering a device. Instead, AuthentifID takes passwordless security to another level. With a quick scan of an identity document and a selfie, AuthentifID biometrically verifies the true account owner at registration, to establish a digital chain of trust between users, their accounts, and their devices.

STEP 1

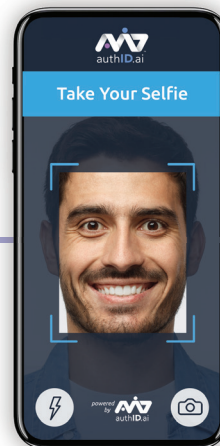

- User opts for passwordless login

STEP 2

- Official ID scanned
- ID photo and data extracted

STEP 3

- Selfie captured
- Active liveness validated

STEP 4

- Biometric matching of selfie to credential photo
- AI liveness and anti-spoofing confirmation
- FIDO2 crypto keys set on device

Identity Verification & Binding. Self-Service Account Recovery.

Quickly integrate passwordless authentication across all major platforms and browsers

Enhance customer satisfaction with passwordless login across multiple devices

Reduce operational costs by eliminating password resets and improving helpdesk efficiency

Meet PSD2 payment authentication regulations. Comply with data privacy regulations.

Stop phishing and account takeover. Strengthen security with authentication bound to known devices & identities.

Delight your customers with quick, low-friction user experiences on trusted devices

Provide trusted, self-service account recovery that is portable and delights customers

Secure FIDO2 authentication and account recovery to a trusted identity. Establish a digital chain of trust between biometrically verified users, their accounts, and their devices. With one selfie, Verified offers trusted, self-service account recovery for lost FIDO devices, and increases trust on high-risk transactions.
