

Stop fraud. End account takeover. Defeat social engineering schemes that attack legacy MFA.

Verified delivers Human Factor Authentication, combining strong FIDO2 passwordless authentication of a registered device, with biometric certainty to verify the human behind the device. With a quick enrollment of a selfie, Verified binds a customer's cloud biometric identity to their FIDO2 enrolled device Passkey.

Verified offers a seamless transition between passwordless login and cloud-based biometric authentication, whenever high assurance is required. Accessible from anywhere, Verified's biometric chain of trust identifies the human behind the device to secure the customer journey with strong identity assurance.

credentials and
failures of
legacy MFA

Reimagine Identity Authentication With Human Factor Authentication

Seamless Customer-Centric Access

Eliminate passwords and vulnerable, legacy MFA at the same time. End credential-based attacks like phishing, smishing, and MFA prompt bombing.

Fully Portable Identity

Verified allows customers to authenticate easily in a browser, with the technologies they love—on their Windows, Mac, iOS and Android devices. Eliminate costs and hassles of dedicated hardware or software authenticators.

Biometric Chain of Trust, Account Recovery

End the risks and frustration associated with device add and recovery. Streamline enrollment and recovery of desktop and mobile devices with secure, human factor authentication.

Simplify Identity Assurance Across your Enterprise

Verified allows users to seamlessly transition between FIDO2 Passkeys and cloud-based biometric authentication, whenever your organization needs high assurance. Gain the enterprise security you need, while easing friction for your customers.

How Does Verified Work?

With a quick, secure cloud biometric enrollment of their selfie, customers then enroll their device with a cryptographic Passkey. Verified's FIDO2 passwordless authentication allows customers to login with the secure device-biometric technologies, including Windows Hello, Apple FaceID and TouchID, and others.

When the enterprise needs to elevate customer privileges to authenticate access to a sensitive application, perform a high-risk activity, or to add or recover a new device, Verified steps up authentication of the customer to an auditable, biometric MFA, available on any device. Verified delivers frictionless human factor to ensure device and identity authentication go hand in hand.

Quickly Launch and Manage Verified

Verified integrates seamlessly through OIDC into your existing IAM provider. Our API-first platform simplifies Zero Trust deployments across complex environments, disparate technologies, legacy and cloud applications, and diverse device sets, without holes in security.

Easily manage enterprise authentication workflow policies in our Identity Portal, directing Verified when to ask for a passkey or step up to cloud biometric authentication.

VerifiedTM Offers Pre-Integration to FinServ & Identity Platforms for Digital Identity Assurance

Verified Strengthens Identity Assurance Across the Customer Journey

Device Agnostic, Cloud-Based

Verify identity anywhere. Browser-based, human factor authentication delivers truly portable digital identity

Account Recovery with Confidence

Reduce help desk TCO with secure self-service account enrollment and recovery in the event of lost or stolen devices

Stop Fraudster Enrollment

Streamline customer enrollment with seamless biometric identity verification. Onboard good customers in minutes
