

SALES SHEET

Enhance Okta Workforce with Human Factor Authentication

Eliminate passwords. Stop credential compromise.

Identify the human behind the device.

Verified plus Okta delivers Human Factor Authentication (HFA) that combines secure FIDO2 passkeys with strong cloud biometric identity assurance, to verify the human behind the device. HFA fortifies 'something the user has' with 'something the user is' to protect work platforms from unauthorized access and lateral movement of bad actors, with truly portable, NIST and FIDO2 compliant authentication.

Deploy unphishable passwordless authentication—on any desktop or mobile device, and everywhere your employees, contractors, and partners work.

80%+

of data breaches
are caused by
compromised
credentials and
failures of legacy MFA

Transform Enterprise Security With Human Factor Authentication

authID binds a user's identity to their passkeys, creating a portable Account Biometric that can recover identity context, at any time, on any device.

Strong Identity Assurance

Always know it's your authorized user – not just their device. Throw away identity assumptions with FIDO2 passkeys, bound with a biometric chain of trust.

Portable Identity

Deliver the portability your workforce demands, using any authorized mobile device or desktop. Securely enroll additional devices anywhere, with no help desk hassles.

Secure Account Recovery

Protect against unauthorized access. Eliminate weak recovery methods. HFA's cloud biometrics frictionlessly reaffirm user identity in the event of lost, stolen or replaced devices.

Zero Trust Access

Comply with EO-14028 in minutes with HFA's unphishable authentication. Invoke HFA anywhere on your network to protect on-prem or cloud resources with zero trust authentication.

Enhance Okta Workforce with Human Factor Authentication

Eliminate passwords. Stop credential compromise.

How Verified HFA Works

With a quick, secure cloud biometric enrollment of their selfie, workforce users then enroll their device with a cryptographic passkey. Verified's FIDO2 passwordless authentication allows employees to login with the secure device-biometric technologies, including Windows Hello, Apple FaceID and TouchID, and others.

In especially high-risk situations or where compliance requires an additional audit trail, such as accessing sensitive data or systems, authID HFA combines passkeys and device biometrics with live Account Biometrics, adding a second factor to verify the user behind the device.

Workforce Benefits:

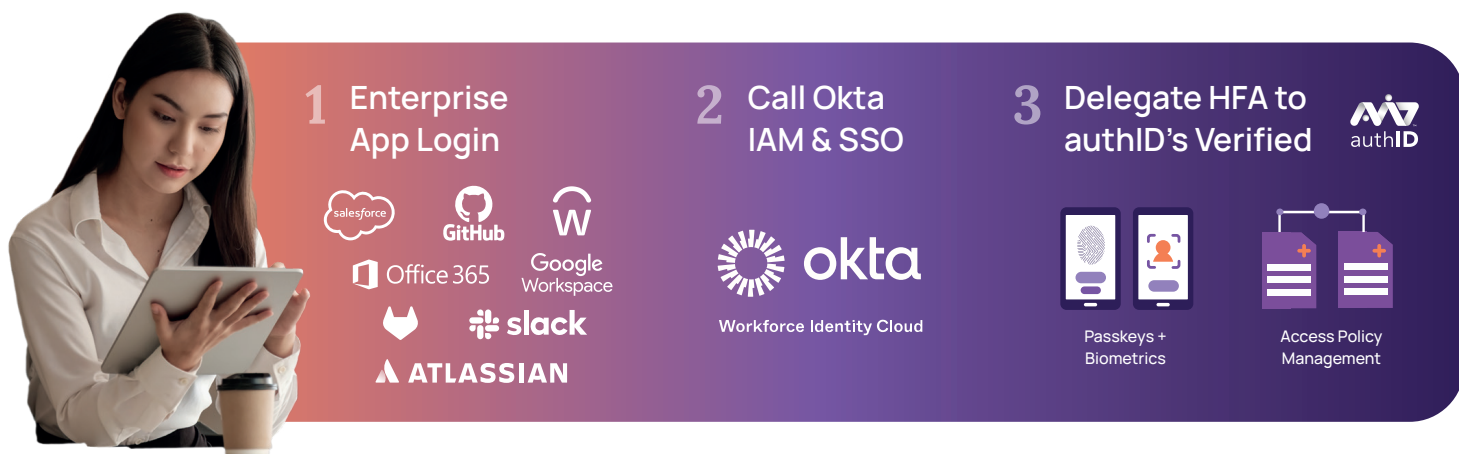

- Stop Phishing & Credential Compromise
- End MFA Fatigue
- Securely enable BYOD
- Enhance Productivity
- Secure Account Recovery

Enterprise Benefits:

- End Lateral Movement by Bad Actors
- Improve adoption of shared devices
- Accelerate the move to Zero Trust
- Lower TCO & Help Desk Costs

Quickly Launch and Manage Verified

authID's integration with Okta secures the legacy, cloud and SaaS systems that run your organization, without complex provisioning needs. Verified + Okta protects against unauthorized access and data compromise dynamically – across your enterprise.
